CERTIFICATE IN EMERGING TECHNOLOGIES IN BUSINESS

The Certificate in Emerging Technologies in Business offers courses covering artificial intelligence for business, blockchain, internet of things, and digital transformation.

Several certificate programs are offered in a number of disciplines taught at the Stuart School of Business. These programs provide students with a post-baccalaureate knowledge of an area of specialization within the discipline. Students in these programs register as certificate students. Students who are admitted to a master's degree program may apply coursework previously taken in a certificate program toward the requirements for the master's degree.

This certificate is designed for professionals who seek to increase their knowledge and skills in a particular area, as well as earn stackable credentials as part of a degree program.
