

BACHELOR OF SCIENCE IN MEDICINAL CHEMISTRY

Medicinal chemistry is a specialized area of chemistry with an emphasis on a study of drug design, drug synthesis, and pharmaceutical and biomedical analysis. The program will provide students with a strong background in traditional chemistry areas as well as a fundamental understanding of chemistry and biological and pharmacological actions of pharmaceuticals and biomedical products. Students will learn to apply biological, chemical, and data science to computer-aided design, synthesis, evaluation, and analysis of structurally diverse drugs for the detection, treatment, and cure of human diseases. The program will prepare students with the technical skills to develop a career in biomedical science, bioanalytical science, biotechnology, medicine, and pharmaceutical science.
